Priyesh Raj

Cloud Security Engineer

Portfolio:
github.com/priyeshr7
linkedin.com/in/priyeshraj

Technical Skills

Languages	Python, Bash, Shell Scripting
Cloud Platforms	AWS (EC2, S3, Lambda, ECS, EKS, CloudFormation, CloudWatch, Glue, SageMaker)
Cloud Security	AWS IAM, GuardDuty, Security Hub, CloudTrail, AWS Config, KMS, Secrets Manager, AWS WAF, Inspector
Security Tools	Trivy, Checkov, Nmap, Wireshark, Burp Suite, OWASP ZAP, Splunk
Security Frameworks	Zero Trust, Least Privilege, Defense in Depth, CIS Benchmarks, NIST CSF, Threat Modeling
DevOps & Tools	Terraform, Docker, Kubernetes, Jenkins, Git, Linux, REST APIs, Prometheus, Grafana
Networking	VPC, Subnets, Security Groups, NACLs, Load Balancers, CIDR, DNS, TLS/SSL, VPN

Experience

Cloud Engineer Intern *Mactores* **Aug 2026**

- Analyzed cloud infrastructure against AWS Well-Architected Framework principles, researching best practices for IAM, network security, resource optimization, and infrastructure resilience.
- Investigated the feasibility of integrating Generative AI and intelligent automation into existing cloud workflows, evaluating potential use cases for operational monitoring, task automation, and decision support.
- Conducted technical evaluations of cloud services and architectural alternatives, documenting findings and presenting recommendations to support senior architects in infrastructure planning.

Professional Projects

AWS Cloud Threat Detection & Automated Incident Response **2026**

- Engineered an event-driven cloud security pipeline using AWS GuardDuty, EventBridge, and Lambda to detect and triage suspicious IAM and EC2 activity.
- Developed Python-based automated incident response workflows for severity-based alerting, EC2 isolation, and security event logging.
- Provisioned security infrastructure using Terraform with least-privilege IAM policies and validated detection workflows through simulated security findings.

Tech Stack: AWS GuardDuty, CloudTrail, EventBridge, Lambda, IAM, EC2, SNS, CloudWatch, Terraform, Python

Secure Three-Tier AWS Architecture using Terraform **2026**

- Architected a three-tier AWS infrastructure using Terraform, implementing public, private, and database subnets for network segmentation.
- Configured Security Groups to restrict application and database access, enforcing controlled traffic flow between infrastructure tiers.
- Implemented encrypted S3 remote state storage with DynamoDB locking and EBS encryption to strengthen infrastructure security.

Tech Stack: AWS VPC, EC2, RDS, ALB, ASG, SG, Terraform, S3

Secure Containerized Deployment on AWS Fargate **2025**

- Deployed a Dockerized application using Amazon ECS, Fargate, and ECR with container workloads isolated in private VPC subnets.
- Configured IAM roles, Security Groups, and Application Load Balancer to control service permissions and restrict direct container exposure.
- Integrated ECR image scanning, CloudWatch monitoring, and CPU-based auto scaling to support container security and availability.

Tech Stack: Docker, AWS ECS, Fargate, ECR, VPC, IAM, ALB, CloudWatch

Education

M.Tech ***Artificial Intelligence & Data Science*** , *National Forensic Science University* 2028
BTech CSE-Data Science, *Lakshmi Narain College Institute of Technology & Excellence* 2026

CERTIFICATIONS

- **AWS Certified Solutions Architect - Associate** Credential Link 2026
- **AWS AI Practitioner** Credential Link 2026
- **AWS Cloud Practitioner** Credential Link 2026
